visitors by country of residence

Questions:

dataset for visitors by country of residence, does it

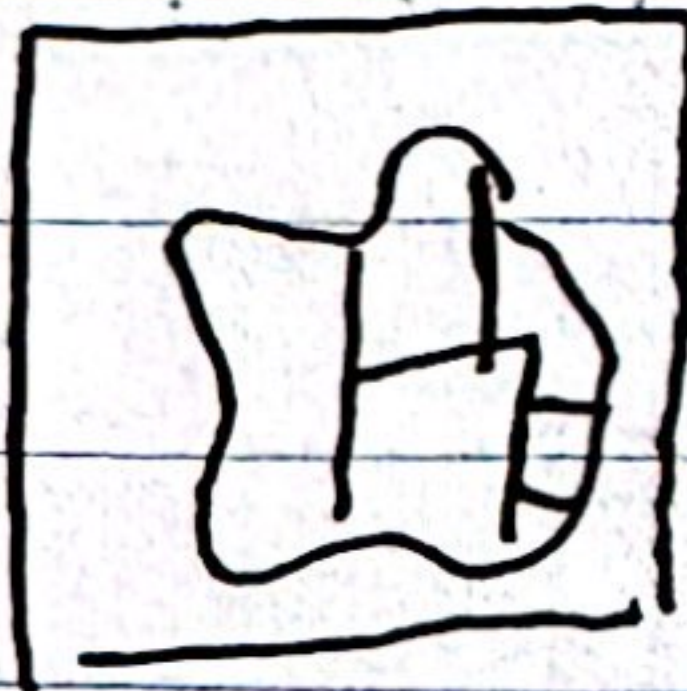

match the world map topojson variables?

consider other visualisation type if map ~~data~~ ^{and} dataset not match.

visitors by country of residence, meaningful or not?
all other visualisations are within Australia. Is it meaningful to add a new info that is out of Aussie?

LAYOUT

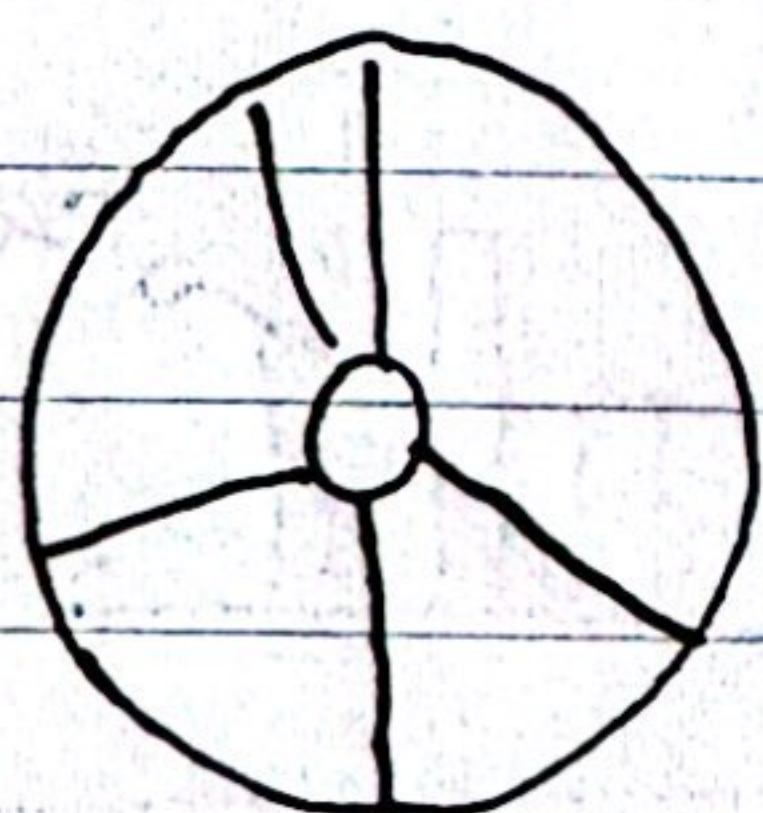

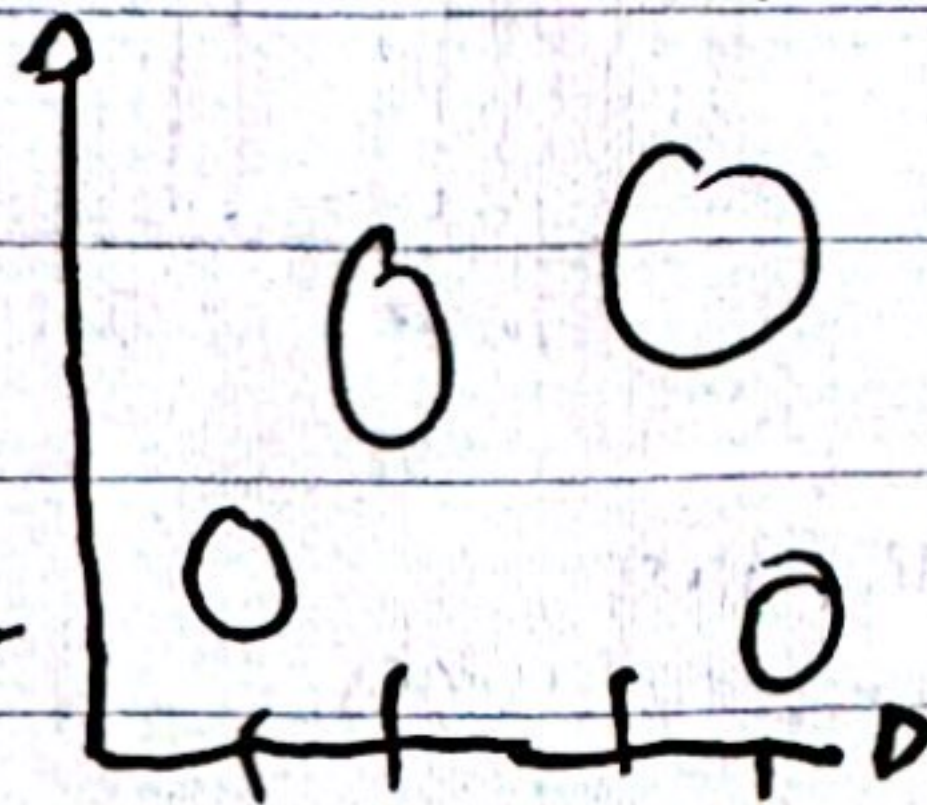

Tourism in Australia

Number of visitors.
(Some text to explain)
→ choropleth, Aussie's states

total expenditure
per state 2024
(some text)

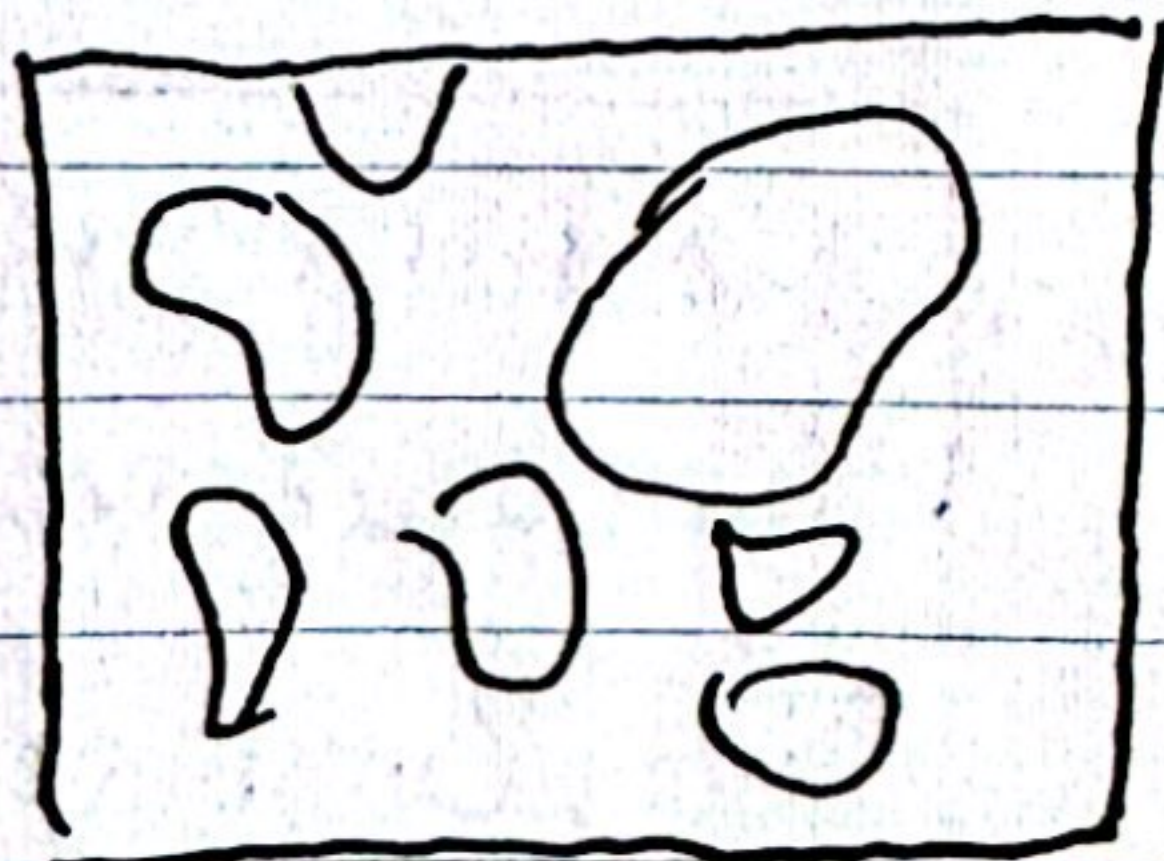

Bubble plot, has
data on visitors and expenditure

Reason for visit 2024
(some text)

→ donut chart

world map &
choropleth

title: Tourism in Australia 2024

author: Evelyn Victoria

date: 28 Sept 2024

sheet: 2

task: overall dashboard

Focus: all charts are
important

Operation: hover function
on all charts

Discussions:

- 07 num of visitors may
need more info. add new
visualisation to add more
info?
- 07 For reasons of visit,
what kind of visit are
they?

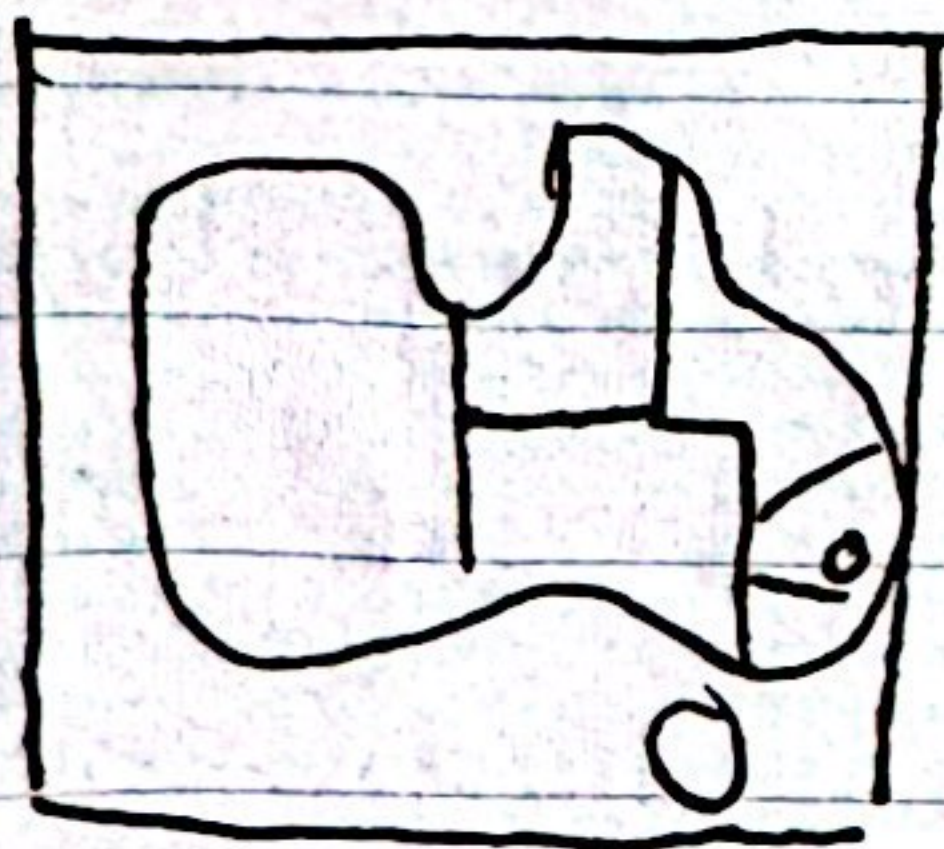

Notes:

- 07 considering to include some text that would explain
the changes in ~~the~~ graph and maps.
- 07 are annotations possible in vegalite or html?
- 07 need to look up about javascript methods for filtering

world map
choropleth map

title: Tourism in Australia 2024
author: Evelyn Victoria
date: 28 September 2024
Sheet: 3
Task: adding more details to visualisations

first one is for 2024,
second is to see difference from 2014 and 2024 visitors number

↑
FOCUS
↓

dropdown menu for type of visit

Operation:

→ dropdown filter
→ hover function on all charts and maps.

Discussion:

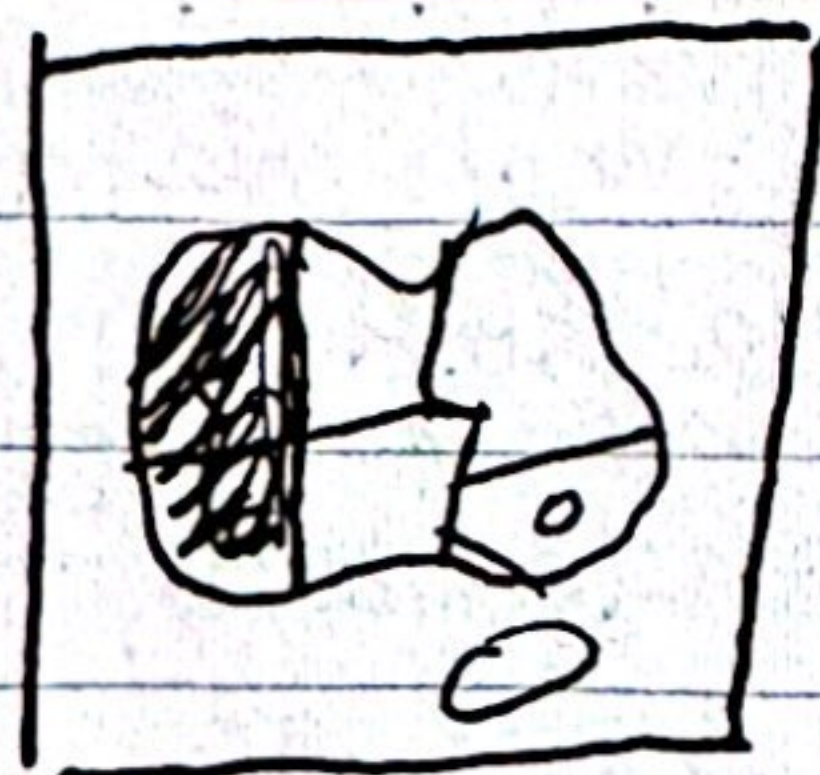

→ use different type of

visualisation for visitor by country, in case dataset not match with choropleth map variable

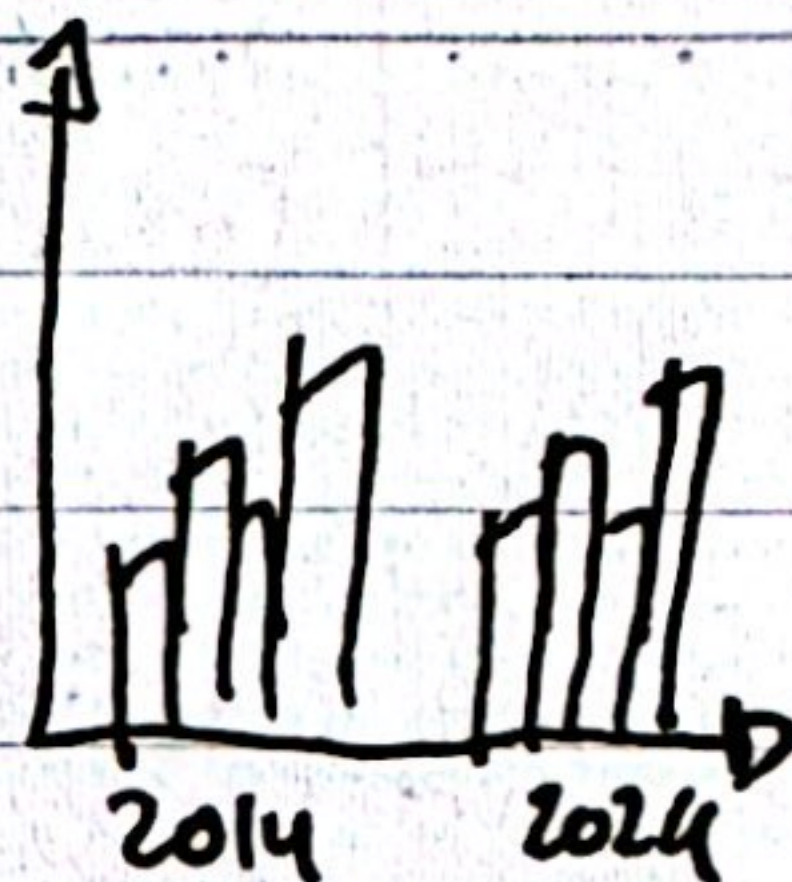

→ dataset for type of visit? available or no?

LAYOUT

Countries

title: Tourism in Australia
author: Evelyn Victoria
No.
date: 28 Sept 2024
Date
sheet: 4
task: confirm dataset
exist and modify

Focus:

removed drop down
menu. replaced with
a simple visualisation
because the dataset
found was not connec-
ted to reason of
visit donut chart
dataset.

changed world
map to bar chart
because data does not
match the variables

Operation: hover for
tooltips

Discussion:

data seems to

bare and visualisation seems too empty. might want to

make up for lack of interactive behaviour

maybe change the visualisation for type of ^{visit} too?

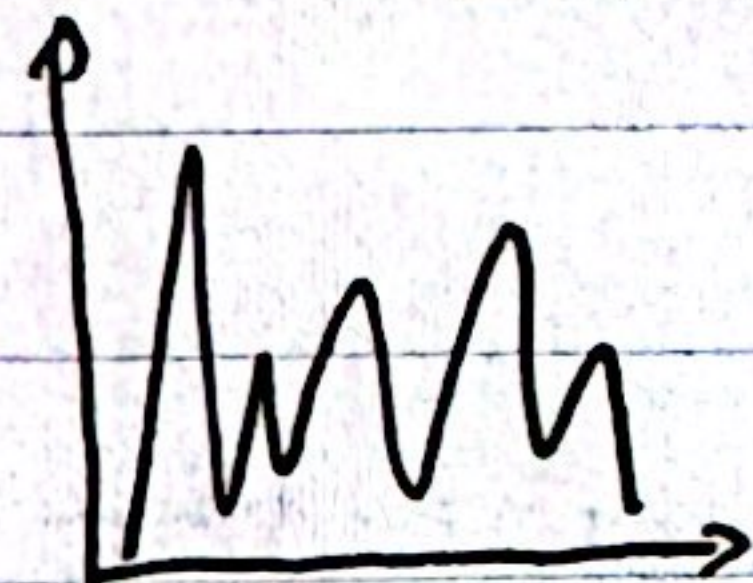

bar chart for visitors by country too cramped and
crowded. opt for different visualisation? or simply

omit it?

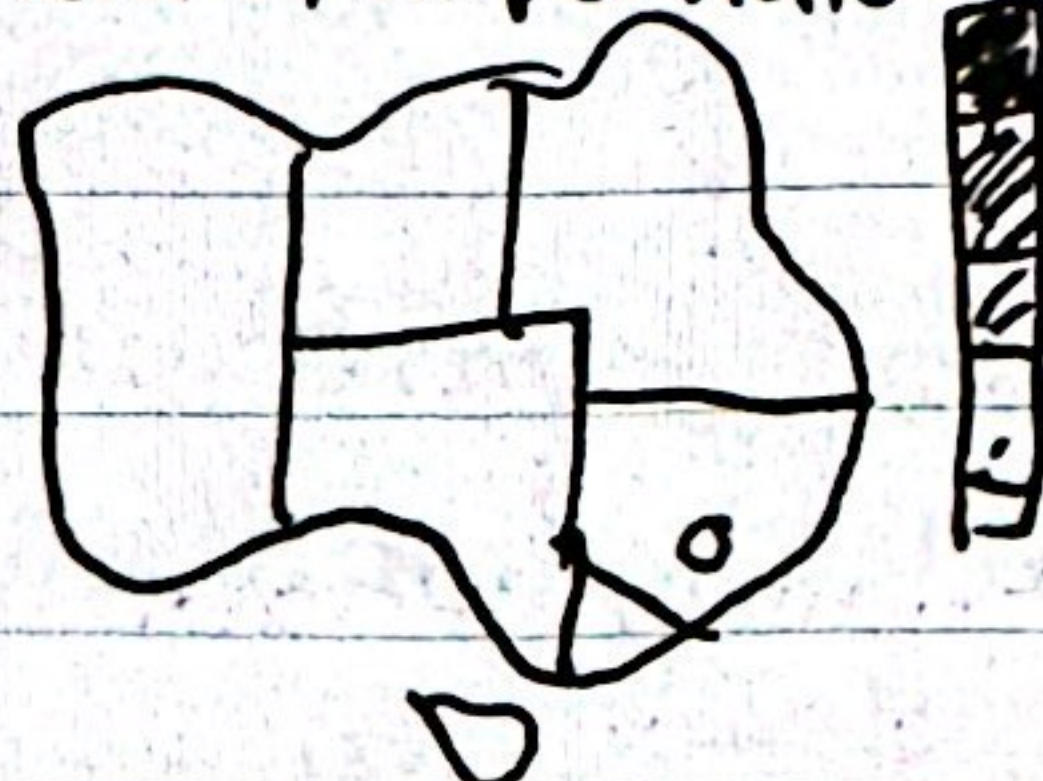

LAYOUT

Tourism in Australia

vis by country of residence

title: ~~Empirical~~ in Australia
author: Evelyn Victoria
date: 4 Oct 2024
sheet: 5
task: Finalised design

Details:

→ first section is total visitors in Australia from 2014-2024 and the choropleth of 2024 visitors to see the distribution of arrival.

→ second section is viewing the difference in number of visitors in 2014 and 2024 per state, followed by the visualization of total expenditure per state in 2024.

→ third section is to show why people visit Australia

→ fourth is to show

the visitors number by country of residence in bar chart to reduce cluttering, (I will only show major countries.

→ Dependencies: ~~state~~ ^{vis} excel, javasmt, vegalite

→ specific requirements: dataset for each charts (self explanatory)
